

QGIS Desktop

QGIS (QGIS) is an Open Source, easy to use community driven Geographic Information System (GIS) that runs on Linux, Windows, Android, Unix and MacOS.

QGIS desktop GIS offers organisations a real alternative to costly vendor based licensing.

QGIS is a fully functioning desktop GIS and includes all the features such as importing data, digitizing, editing, data analysis, geoprocessing, database connectivity and raster processing. The highly capable print layout functionality is intuitive and user friendly for users to create professional maps.

QGIS is an official project of the Open Source Geospatial Foundation
