

GeoServer

Designed for interoperability, GeoServer publishes data from any major spatial data source using open standards.

GeoServer is a web server that allows you to serve maps and data from a variety of formats to standard clients such as web browsers and desktop GIS programs. Data is published via standards based interfaces, such as WMS, WFS, WCS, WPS, Tile Caching and more. GeoServer comes with a browser-based management interface and connects to multiple data sources at the back end.

GeoServer is an official project of the Open Source Geospatial Foundation
